

2023 Professional Master's Degree Summer Experience Report

Executive Summary

Professional master's students seeking summer experiences in the summer of 2023 have started to venture back out into a wider range of opportunities. Ninety-six percent (96%) of Nicholas School professional master's students, Master of Environmental Management (MEM) and Master of Forestry (MF), known to be seeking opportunities reported securing a meaningful summer experience. This report contains data on these experiences, broken down by sector and program area.

Background, Audience, & Methods

Background: The Nicholas School professional master's degree program highly recommends a meaningful summer experience for current students. These experiences, historically called internships, typically occur for 8-12 weeks in the summer between academic years when returning to a full-time degree program the following fall semester. They could be full-time or part-time in duration.

In 2023, summer student experiences also included project-based remote work, research projects, fellowships related to academic coursework, and professional experiences that may extend beyond the summer months. For these purposes, the broader term "summer experience" is used in this report.

Audience: The Nicholas School Career and Professional Development Center (CPDC) surveyed 163 rising second- or third- year Master of Environmental Management (MEM), Master of Environmental Management or Forestry/Master of Business Administration (MEM or MF/MBA), Master of Environmental Management/Master of Engineering Management (MEM/E-MGT), Master of Environmental Management/Master of Public Policy (MEM/MPP), Master of Environmental Management/Juris Doctor (MEM/JD), Master of Environmental Management/Master of City and Regional Planning (MEM/MCRP), and/or Master of Forestry (MF) students. As the Duke Environmental Leadership Master of Environmental Management (DEL-MEM) students are working environmental professionals, the majority generally do not seek summer experiences, but those who respond to the survey are included.

Methods: CPDC created and distributed a survey that was sent to the identified audience of 163 students in June 2023 and received 131 survey responses (80% completion rate). Requests for survey completion were followed by online research and email contacts requesting confirmation of summer experience information. Augmented by this knowledge, CPDC obtained information or responses from an additional 16 individuals, for a total of 147 students (90% of the identified audience). *Results Section 1* looks at trends for all survey respondents, and *Results Section 2* provides information by sector, concentration(s), and degree(s) from students who elected to share information via the survey. Ten students were not included in the analysis because they either reported not needing or seeking an experience, or information on their experience could not be obtained by online research or email contact.

Results Section 1: General Trends

This section of the report analyzes the 147 out of 153 (96%) experiences students known to be seeking experiences reported or were known to have in Summer 2023.

Figure 1: Distribution by Sector

Private sector hosts (Business/Industry = 27% and Consulting = 9%) and NGOs (39%) accounted for 72% of 2023 summer experience hosts. Consulting firms stayed consistent to percentages reported last year in 2022. The Stanback Fellowship Program (SFP) accounted for 67% of the NGO summer experiences.

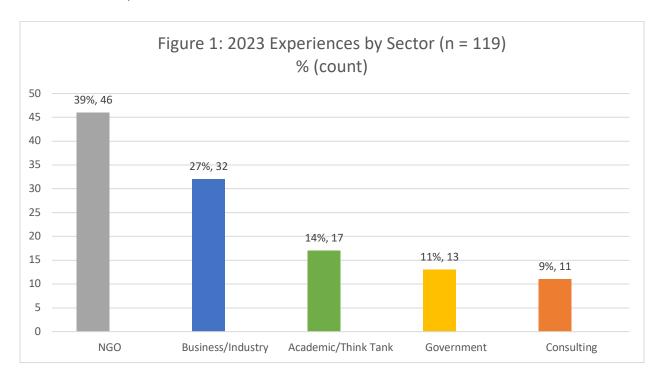

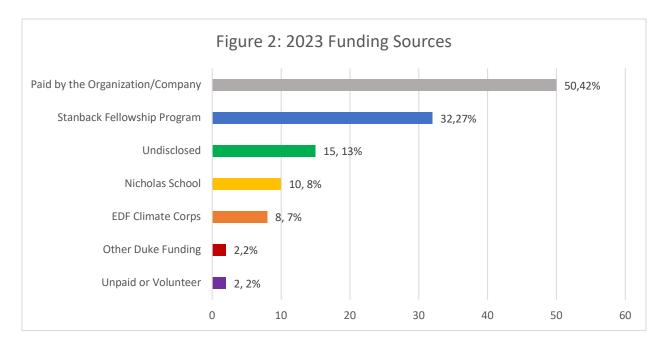

Figure 2. Funding Sources

Duke University sources either partially or fully supported at least 37% of summer experiences. For the third straight year, companies or programs providing funding for summer experiences was a higher percentage of funding than Duke-related funds. Nevertheless, the value of this support to individual students remains high.

In its 27th year, the <u>Stanback Fellowship Program</u> (SFP) provided partial funding for Duke students matched with select non-profit hosts for ~11 weeks. The Stanback Fellowship Program consistently accounts for 20-30% of summer experiences. Additional support was made possible by awards from the Edna B. Sussman Foundation, the David R. Brower Fund, the Whitney E. Chamberlain Fund, the Karen Kirchof Internship Fund, and the Kuzmier-Lee-Nikitine (KLN) Fund. 2023 represents the last year the Edna B. Sussman Foundation funding will be available to Nicholas School students as the program announced it is ending after 37 successful years and over 1.1 million dollars in awards made to Duke students.

Figures 3 and 4. Physical Locations

Experiences ranged from policy or data analysis to business sustainability to field-based experiences in a range of locations and for employers across the globe. United States locations included California, Colorado, District of Columbia, Florida, Hawaii, Illinois, Maryland, Massachusetts, North Carolina, Oregon, Texas, and Virginia. In 2023, 44% of survey question respondents reported a remote or hybrid experience, a decrease from the 66% in Summer 2022. The work style color scheme indicates whether the student was in a state and conducted in-person work (yellow), remote work from that state (blue), or a hybrid work arrangement (green).

Figure 3: Locations in the United States, 2023

Created with mapchart.ne

Figure 4 illustrates the eight students known to have in-person international experiences (red). These include Chile, China (3), Gabon (3), and New Zealand.

Figure 4. International locations, 2023
