

Dear Urban Tropical Ecology Student,

We are providing this statement to make you aware of the demands of the course and what is expected of you physically and emotionally. Traveling 12 time zones can have unpredictable physical and emotional consequences. You will not know how you respond until you have the experience. Humans adjust about two time zones a day so you can expect to be back to normal in about 6 days.

In order to maximize our abbreviated time in Singapore and the surrounding area, we are active every day and timing can range from early (6 am) to late (up to midnight). We walk between 5 and 13 miles a day. We expect you to do this and to keep up unless you have a disability.

We expect that you will attend every activity unless you are incapacitated due to illness that requires medical treatment. If you know that you are physically unable to do this level of activity but would still like the experience, contact us immediately and we will have a conversation and see if we can accommodate you with alternate activities.

I have read and agree to the expectations of the course.
